

Advanced Elasticsearch

Description

This instructor-led course is designed for Elasticsearch professionals who need to expand their skill set for developing and managing powerful search and analytics solutions with the Elastic Stack. You will learn advanced cluster management techniques, best practices for capacity planning and scaling, tips for monitoring and alerting, considerations for going into production, and more. You will also dig into field and document modeling, fixing data with Painless scripting, cross-cluster search, pipeline aggregations, and more.

This instructor-led course is designed for Elasticsearch professionals who need to expand their skill set for developing and managing powerful search and analytics solutions with the Elastic Stack.

Delegates will learn how to

- advanced cluster management techniques
- best practices for capacity planning and scaling
- tips for monitoring and alerting
- considerations for going into production, and more.
- also dig into field and document modeling, fixing data with Painless scripting, cross-cluster search, pipeline aggregations, and more

Audience

Experienced Elasticsearch professionals who need to expand their knowledge of Elasticsearch cluster management and application development

Outline

Field Modeling

Fixing Data

Advanced Search and Aggregations

Cluster Management

Capacity Planning

Elasticsearch Internals

Document Modeling

Monitoring and Alerting

Moving from Dev to Production

Prerequisites

Core ElasticSearch course must be taken.
