

Agile Business Analysis

Duration: 2 Days

Description

The Agile business analysis training aims to merge business analysis processes with Agile methodology to develop more flexible and adaptive business solutions. The training covers topics such as integrating traditional business analysis methods with Agile agility, identifying and managing requirements, creating user stories, collaborating with product owners, and continuous improvement processes.

This training is particularly valuable for business analysts, product owners, project managers, and Agile teams working in software development projects. The goal of the training is to equip participants with the skills to effectively manage business analysis processes in line with Agile principles.

Audience

- Business Analysts, Systems Analysts, Project Managers, Team Leaders/Managers, and Enterprise Architects
- Individuals taking on the role of Product Owner in Scrum Teams
- Those who wish to enhance their knowledge and improve their performance in the areas of Business Analysis and Project Scope Management
