

Effective Measures Against Data Leaks

Duration: 1 Day · **Training format:** Virtual Classroom / Online

Description

Participants are provided with the necessary technical information on creating processes to take effective measures against data leaks and preventing data leaks.

Delegates will learn

- Data Leaks
- Data Leaking from Clients and Servers
- Data Infiltration from Applications
- Measures against Data Infiltrations

Outline

Data Leaks

- Threats targeting databases
- Finding data in the organization network
- Understanding the value of data
- Risk analyses related to data losses

Data Leaking from Clients and Servers

- Leaking data with USB and portable devices
- Data leakage over the network
- Physical data leakage
- Other data leakage methods

Data Infiltration from Applications

- Data leakage through web applications
- Ensuring application security against data leakage
- Access and authorization controls
- Backup and archiving

Measures against Data Infiltrations

- Technological measures against data leakage

- Establishment of policies and processes
- Long-term measures
- What to do in case of data leakage

Prerequisites

There are no prerequisites
