

Effective Use Of Safety Devices

Duration: 1 Day

Description

Transferring the necessary information for the effective use of information security solutions in the organization network.

Delegates will learn

- Safety Devices
- Information Security Technology
- Use Scenarios of Information Security Devices
- Information Security Devices Integration

Outline

Safety Devices

- Information security principles
- Information security models
- “Next generation” security devices
- Taking security inventory

Information Security Technology

- Basic security technologies
- Safety modules on operating systems
- Network security technologies
- System security technologies

Use Scenarios of Information Security Devices

- Principles of threat modeling
- Positioning security devices
- Installation and configuration of security devices
- Active security device management

Information Security Devices Integration

- Integration of security devices with each other

- Integration of security devices with other systems
- Updates of information security devices
- Integration of devices into information security management processes

Prerequisites

There are no prerequisites
