

PowerShell for SharePoint Administrators

Duration: 1 Day · **Training format:** Virtual Classroom / Online

Description

This one-day instructor-led PowerShell for SharePoint Administrators training class provides students with the knowledge and skills needed to use PowerShell to administer SharePoint Servers. Students will learn how to manage day-to-day and automated tasks carried out by SharePoint Administrators.

This course is intended for SharePoint administrators who work in a Windows network environment. At least one year of experience managing SharePoint servers and using PowerShell is recommended.

Delegates will learn how to

- configure SharePoint Servers using PowerShell.
- manage SharePoint Server Administration with PowerShell.
- manage SharePoint Server Maintenance with PowerShell.
